
RESEARCH INTERESTS

My global research objective is to identify specific biomarker 'signatures' that are predictive of the prognosis and/or progression of disease as this basic knowledge is required to improve diagnostic and treatment options. More specifically, my work involves investigating the continually evolving pathophysiology of chronic diseases with an inflammatory element. My current emphasis is on investigating mechanisms that are involved in the altered neuro-cardiovascular responses to exercise along with the development of neuropathy in diabetes.

EDUCATION

Ph.D. in Exercise Physiology Environment and Autonomic Physiology Laboratory University of Texas, Austin, TX Mentor: Robert Matthew Brothers, Ph.D.	2010 - 2014
M.S. in Exercise Physiology Cardiovascular Aging Laboratory University of Texas, Austin, TX Mentor: Hiro Tanaka, Ph.D.	2008 - 2010
B.S. in Medical Laboratory Sciences University of British Columbia, Vancouver, BC	2004
Medical Laboratory Technologist Thunder Bay Institute of Medical Technology, Thunder Bay, ON	1991

PROFESSIONAL AND TEACHING EXPERIENCE

Research Assistant Professor Director: Health & Integrative Physiology Laboratory University of Texas, Austin, TX	2020 – Present
<ul style="list-style-type: none">• Collaborative research projects<ul style="list-style-type: none">○ Investigating the role of inflammation in the temporal changes in neural control of the circulation during exercise with the progression of type 1 and type 2 diabetes in rat models○ Exploring the predictive power of cytokines in detecting underlying mild cognitive impairment that persists in a high percentage of breast cancer survivors○ Examining changes in cytokine profiles in people living with HIV who develop type 2 diabetes as a co-morbid condition and the relation of these biomarkers to clinical symptoms• Supervising and managing the research activities in a shared biochemical laboratory space<ul style="list-style-type: none">○ Supervise graduate student and research assistant activities in the lab○ Ensure institutional compliance for all research activities○ Oversee the development of SOPs for new biochemical analyses	
Research Engineering / Scientist Associate III Director: Health & Integrative Physiology Laboratory University of Texas, Austin, TX	2015 – 2020
<ul style="list-style-type: none">• Coordinated biochemical research activities for multiple PIs in a shared biochemical laboratory• Coordinated service activities involving phlebotomy and specimen processing for researchers outside of the department	

- Supervised graduate student and research assistant activities in the lab
- Ensured institutional compliance for all research activities
- Wrote SOPs for biochemical analyses being conducted in the shared lab

Lecturer

2014 – 2017

University of Texas, Austin, TX

- Created and taught undergraduate Applied Human Anatomy labs
- Taught an undergraduate course on Diagnosis and Evaluation of Fitness; focused on the role of exercise in reducing the risk of chronic disease
- Supervised graduate teaching assistants

Program Coordinator

2014 – 2015

Environment and Autonomic Physiology Laboratory
University of Texas, Austin, TX

- Established SOPs for laboratory biochemical procedures
- Coordinated laboratory research activities
- Prepared, reviewed and edited documents for institutional research protocol approval, grants and manuscripts

Graduate Teaching Assistant

2010 – 2014

University of Texas, Austin, TX

- Supervised laboratory and discussion sessions for undergraduate courses
 - Introductory Biology
 - Human Microscopic and Gross Anatomy
 - Human Systems Physiology
- Prepared and graded quizzes and exams

Medical Laboratory Technologist

1991 – 1998

Burnaby General Hospital, Burnaby, BC
McKellar General Hospital, Thunder Bay, ON

- Responsible for the operation, maintenance, and troubleshooting of analytical instrumentation in a clinical setting
- Performed various biochemical analyses in Hematology, Chemistry, Blood Bank, and Microbiology
- Phlebotomy
