### RESEARCH INTERESTS

The overarching theme of my work is the connection between Earth and life through time, more precisely, understanding ancient (Mesozoic and Cenozoic) ocean ecosystems and the evolutionary and environmental events that shaped them. My research is interdisciplinary, (paleontology, sedimentology, biology, geochemistry, and oceanography) and focuses on: extinctions and carbon cycle perturbation events (e.g., Oceanic Anoxic Events, acidification events); marine (paleo)ecology and reef systems; the evolution of reef builders (e.g., coral photosymbiosis); and exceptionally preserved fossil deposits (Lagerstätten).

## **CREATIVE WORKS**

1. **“Taphonomy: Dead and Fossilized”** – Anna Weiss and Rowan Martindale developed an educational board game about fossilization (Martindale and Weiss, 2020). The game is modeled after an Early Jurassic-aged fossil deposit in Canada. Through competitive gameplay, players learn about fossilization and how biology, environment, and taphonomic factors influence whether an organism is preserved. This game can be used for entertainment (informal learning), or as an active learning tool for undergraduate and high school classes (educational material developed with a local teacher, Mr. Enrique Reyes, and graduate student Ms. Estefania Salgado-Jauregui). More information here: [www.jsg.utexas.edu/martindale/paleontological-board-games/](http://www.jsg.utexas.edu/martindale/paleontological-board-games/)
  - a. The undergraduate module (Martindale and Weiss, 2020) is part of the SERC “On the Cutting Edge Exemplary Teaching Activities collection”: <https://serc.carleton.edu/teachearth/activities/231524.html>.
  - b. A modified version of the game was as well as an educational module aligned to NGSS and TEKS learning goals was designed by Mr. Enrique Reyes and assessed by Ms. Estefanía Salgado Jauregui (Salgado Jauregui et al., 2022). It is also part of the SERC “On the Cutting-Edge Exemplary Teaching Activities collection”: <https://serc.carleton.edu/teachearth/activities/234609.html>.
  - c. Virtual versions of the game are also accessible; instructions are on PI Martindale’s website (<https://www.jsg.utexas.edu/martindale/paleontological-board-games/>).
  
2. **“Reef Survivor”** – Rowan Martindale developed an educational board game about reef ecology and evolution. The game can be modified for any time period with reefs (current draft focused on modern reef communities). Through competitive and collaborative gameplay, players learn about reef communities, evolution and natural selection, ecology, niches, and how different (natural) disasters can influence a reef community’s survival. Ph.D. student Estefanía Salgado Jauregui is working on an adaptation for use specifically with reef conservation in Jamaica in collaboration with colleagues at the University of the West Indies, Mona, and Alligator Head Foundation. Middle School versions for Texas and Jamaica are also in development.
