

Xiaohua (Eric) Xu

Contact Information:

Scripps Institution of Oceanography
La Jolla, CA 92093-0225

xix016@ucsd.edu
(858)900-6950

Present Position:

Postdoctoral Researcher in Geophysics, Scripps Institution of Oceanography

Education:

Ph.D. 2017 University of California San Diego, Earth Sciences
B.S. 2012 University of Science and Technology of China, Geophysics

Professional Experience:

2021/09-present University of Texas at Austin Institute for Geophysics
Research Associate
2017/12-2021/08 Scripps Institution of Oceanography
Postdoctoral Researcher
2012/09-2017/11 Scripps Institution of Oceanography
Graduate Research Assistant

Research Interest:

Strain/moment accumulation: Use geodetic observations to estimate fault slip rate, strain/moment accumulation rate, and on/off-fault strain partitioning. Understand how these evaluations can be related to seismic hazard.

Earth surface deformation observation and modeling: Investigate large/small scale coseismic/interseismic deformation, and the related fault behaviors. Model surface change due to magma activities, reservoir depletion, ice motion and hydrological activities.

Large InSAR dataset processing: Developer of GMTSAR to improve accuracy and reliability of InSAR data processing. Develop robust algorithms to construct deformation time-series. Recent development can be found <https://github.com/gmtsar/gmtsar>. A product of InSAR time-series along the San Andreas fault system <https://topex.ucsd.edu/gmtsar/insargen/>.

3. SSA Meeting 2015, Pasadena, CA, U.S., “Refining the magnitude of shallow slip deficit”.
2. FRINGE Meeting 2015, Frascati, Italy, “Assessment of ScanSAR Interferometry from Sentinel-1 and ALOS-2”.
1. FRINGE Meeting 2015, Frascati, Italy, “Refining the magnitude of shallow slip deficit”.

Teaching experience:

Instructor at GMTSAR short courses 2015-2021: This 2.5-day course covers the theory and application of InSAR processing with GMTSAR. The course materials can be found <https://www.unavco.org/education/professional-development/short-courses/2018/insar-gmtsar/insar-gmtsar.html>. In 2020, our on-line course successfully hosted 150+ participants from around the world. We (David T. Sandwell & Xiaohua Xu) also did a 5-day summer school at University of Chinese Academy of Sciences in summer 2017. I myself held a crash-course on basic InSAR theory with GMTSAR (3-hour) at University of Science and Technology of China in April 2019. I also volunteer lecturing on InSAR techniques on Space Geodesy seminars at Scripps.

Primary Instructor for Space Geodesy 2019 (SIO 237): This is a seminar class with casual lectures, paper discussions, research projects and field surveys. I organized the syllabus and took the leading position on lectures of InSAR theory and processing. (<https://topex.ucsd.edu/insar/>)

Instructor at GMT short course 2019-2021: This 2-day course covers the mostly applications of GMT in plotting and displaying geophysical data. With the future release of GMT6, the scripting of GMT will become much easier with modern mode. I was involved in the applications to geodetic data, e.g. plotting GPS and InSAR.

Guest lecturer for Satellite Remote Sensing 2018-2019: I was invited to give lectures talking about applications of InSAR/GPS and other geodetic measurements on natural hazards and anthropogenic activities at Scripps.

Teaching assistant for Satellite Remote Sensing 2014: This course was co-taught by David T. Sandwell and Hellen A. Fricker at Scripps Institution of Oceanography, UCSD. As a teaching assistant, I was in charge of the laboratory part for students to apply their learned remote sensing knowledge to actual geophysical problems.

Field Experiments:

Two GPS field trips to Ridgecrest 2019 (4 days in total)

GPS field trip to Mexicali Mexico 2018 (2 days)

Seagoing cruise across Mendocino Fracture Zone 2017 (8 days)

GPS field trip to North Shore Salton Sea 2017 (2 days)

GPS field trip to Imperial Valley 2016 (2 days)

GPS field trip to Mexicali Mexico 2015 (2 days)

GPS field trip to Mexicali Mexico 2014 (2 days)

GPS field trip to Highway 79 2014 (2 days)

GPS field trip to Laguna Salada Mexico Fall 2012 (2 days)

Current Support (help written):

Title: Estimating Seismic Hazard Along the San Andreas Fault System from InSAR and GNSS
Source of Support: NASA ROSES-2018 ESI (Sandwell – PI)
Total Award Period: 06/01/19-05/31/22
Location of Project: SIO
Person-Months on Project: 6/yr

Title: Elements: Software – Harnessing the InSAR Data Revolution: GMTSAR
Source of Support: NSF OAC-1834807 UCSD 20183642 (Sandwell PI)
Total Award Period: 10/01/18-09/30/21
Location of Project: SIO
Person-Months on Project: 6/yr

Title: SCEC-NASA collaborative Proposal: Crustal Deformation Time Series from InSAR and GPS
Source of Support: SCEC – USC Subgrant 072933393 UCSD 175104595 (Sandwell PI)
Total Award Period: 02/01/20-01/31/21
Location of Project: SIO
Person-Months on Project: 2/yr
